The Points of Reference are elevation.

Notes:

1. Surge limits are based on still water above the SWL at high tide with no wave amplification.
2. Total Storm Tide limits were derived from Maximum still water storm tide height over 2004 base digital elevation model.
3. Elevations and locations determined to be critical to emergency management operations.
4. This map is for emergency planning purposes only.

Storm Tide Limits
Pasco County, 2016
