

National HIV Testing Day

June 27, 2020

HIV among Floridians

119,661

persons were living with an HIV diagnosis in Florida year-end 2018

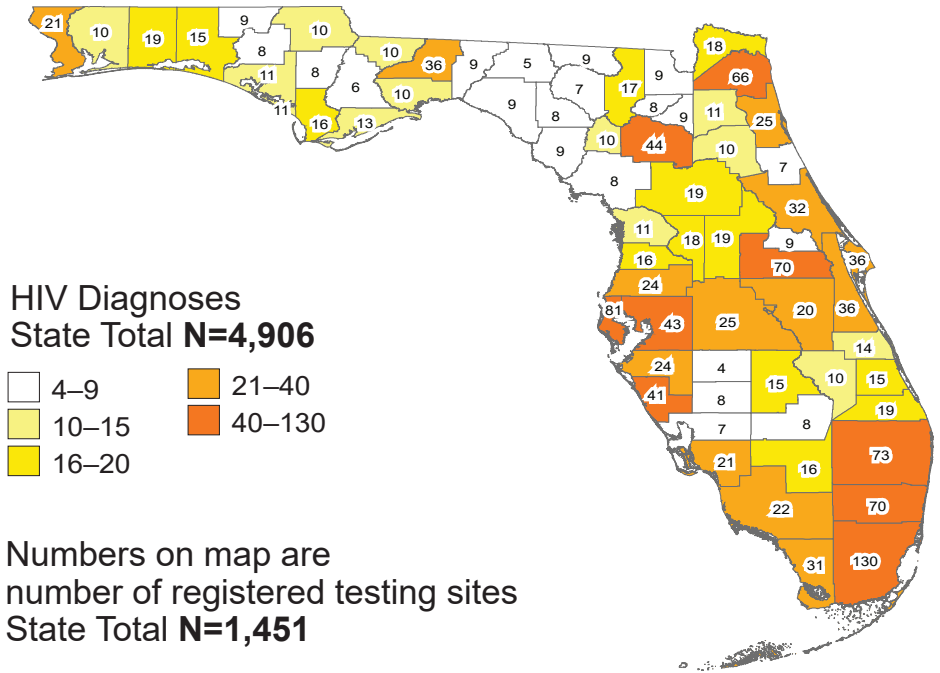

4,906

persons received an HIV diagnosis in Florida in 2018

1,918

persons received an AIDS diagnosis in Florida in 2018

HIV Diagnoses by County of Residence, and Registered Testing Sites, 2018, Florida

HIV Testing

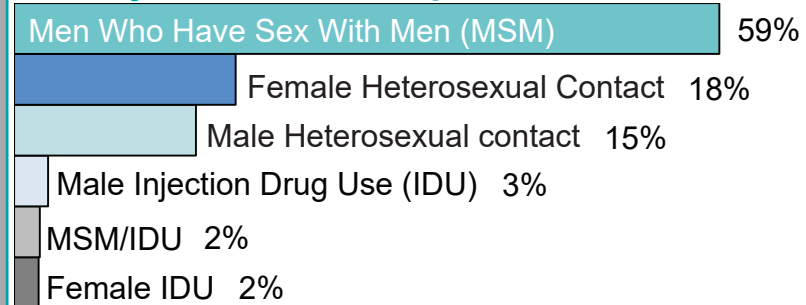

344,064

HIV tests were conducted in Florida in 2018 at

1,400+

registered HIV test sites across the state

Person who received and HIV diagnosis in Florida in 2018 by mode of HIV exposure

"Other Risk" (n=44) includes perinatal, transgender sexual contact, hemophilia, and blood transfusion transmission and is not shown as it accounts for <1% of diagnoses

Blacks represented the highest proportion of persons who received an HIV diagnosis in Florida in 2018

¹Other includes Asian/Pacific Islanders, American Indians/Native Alaskans and mixed races.

protect yourself.

KnowYourHIVStatus.com

In Florida at the end of 2018:

1 in 292

White adults were living with HIV

1 in 156

Hispanic/Latino adults were living with HIV

1 in 49

Black adults were living with HIV

Florida Health encourages Floridians to **Test Your Way** on National HIV Testing Day

HIV Testing

All adolescents and adults (ages 13–64) should be tested for HIV at least once during their lifetime. Persons at increased risk for HIV should be tested **annually**. Per Florida law, all pregnant women are to be tested for HIV and other sexually transmitted infections (STIs) at their initial prenatal care visit, again at 28–32 weeks and at labor and delivery if HIV status is unknown.

Pre-Exposure Prophylaxis (PrEP)

For persons at increased risk for HIV, PrEP medication, taken once daily, can reduce the risk of acquiring HIV through sexual contact by over 90% and through injection drug use by 70%. Condoms are still important during sex to prevent other STIs and unwanted pregnancy. STIs are increasing in Florida and can increase HIV risk.

To find a PrEP provider visit:

www.prelocator.org

Antiretroviral Therapy (ART)

For persons living with HIV, starting ART with a provider as soon as possible improves health outcomes by reducing the risk of disease progression and reducing viral load. Persons living with HIV who take ART as prescribed and get and keep an undetectable viral load have effectively no risk of transmitting HIV to their HIV-negative sexual partners. ART is recommended for all persons living with HIV, regardless of how long they have had the virus or how healthy they are. To find a care provider or to learn more about the resources available to persons living with HIV visit: www.floridaaids.org
